GREENER SHINGLES

Don't Replace. Rejuvenate.

www.GreenerShingles.com

Greener Shingles is a scientifically formulated treatment that is a USDA certified 90% Bio-based product. This plant-based oil quickly penetrates deep into asphalt shingles to replace lost oils. The all-natural solution quickly restores your roof's flexibility and extends the serviceable life of your asphalt shingles by greatly reducing the loss of the protective granular coating.

Soy bean oil based rejuvenators have been used to rejuvenate asphalt parking lots and roadways for the past fifteen years. Greener Shingles has adapted that same technology to extend the life span of asphalt shingles, helping homeowners extend the life of their shingles 5 - 15 years.

Rejuvenated with
Greener Shingles

"The shingles are looking almost brand new again..."

"I had it sprayed **about a year ago** and I'm just so delighted with it because it still looks almost like new..."

"I am very pleased with the product and the people that put it on the roof..."

Asphalt roofs usually start showing signs of aging after five to ten years depending on region and environmental conditions. The shingle's protective granular coating starts washing into the gutters as the essential oils dry up, losing the ability to hold the granular in place. Greener Shingles also helps waterproof the surface, suffocate moss, and increase shingle flexibility which preserves and rejuvenates the shingles to extend their lifetime, keeping them on your roof where they belong.

FAQ

Q: Is Greener Shingles safe?

A: Greener Shingles is made with 90% bio-based natural food grade oils. It is safe in small quantities found in our applications, easily washed off with water and is safe around pets, plants, and people.

Q: How much does it cost?

A: Typically, shingle rejuvenation costs 15% of the cost of replacement. An average cost of roof replacement in 2020 was \$10,000 compared to only \$1,500 to rejuvenate.

Q: What temperatures are required to put this on my roof?

A: Typically we suggest the temperature be at least 4 to 5 degrees above freezing and rising with no rain in the forecast for 45 minutes.

Q: Does this help with moss and algae growing on my roof?

A: Yes, we suggest cleaning the roof first, then rejuvenating the shingles with the Greener Shingles product. Any moss or algae left will be smothered and killed. (Visit our website to see photos)

Q: Does Greener Shingles change the color of the shingles?

A: Yes, the color of the shingles will darken, similar to what it was like when new. Within a couple of years the shingles will start to lighten up as the surface oils begin to oxidize off.

Q: What does the warranty cover?

A: Our five year prorated warranty covers the fact that Greener Shingles will extend the life of the shingle five years past the expected life of the shingle in the environment they are in. Some owners want to stop the aging process on older shingles, so depending on how old they are we may not be able to warranty a shingle that is starting to show signs of extreme aging, like when the shingles are starting to curl up. The warranty is transferable to the next homeowner.

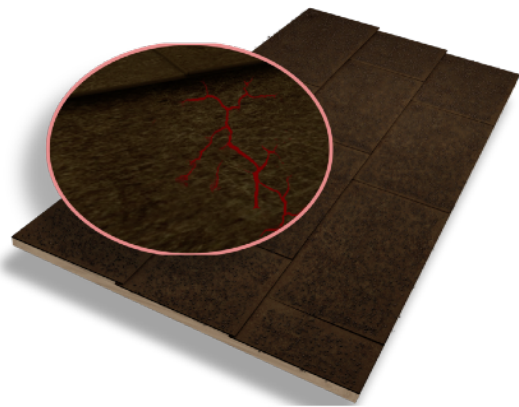

Q: How do I know if my shingles need rejuvenation?

A: Typically, shingles that are ten years old start to show signs of aging, granular loss and could use rejuvenation before they start to curl up and become brittle.

Lab Tested, Field Proven!

PRI Asphalt Technologies Inc, one of the largest shingle and asphalt testing labs in the world has tested Greener Shingle's bio-based product and concluded that Greener Shingles extends asphalt shingles life span, improves granular adhesion by 86% and makes asphalt shingles 40% more flame resistant.

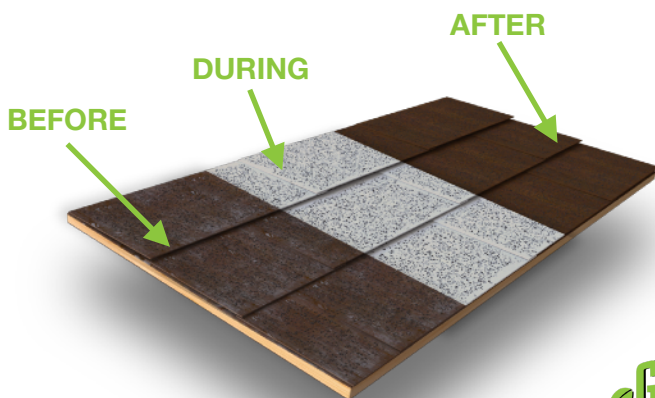

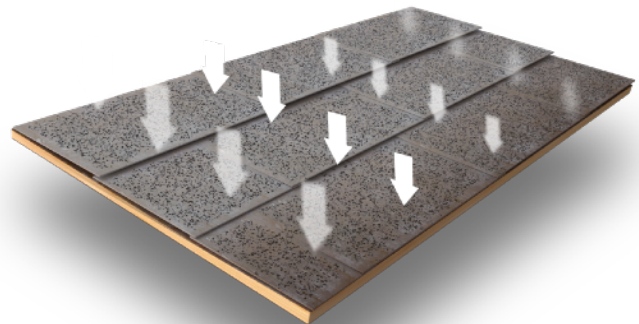

Increased Granular Adhesion

Greener Shingles preserves the life of asphalt shingles by replacing lost oils, suffocating moss growth, increasing flexibility, and keeping the granular in place.

Replacing Lost Oils

Natural agriculture oils have been used for the past 15 years to rejuvenate asphalt roads to replace the oils that are lost through years of aging, it works the same for asphalt roof shingles.

Like NEW Look

After just one application, your roof will look new again. The re-saturated shingles will look darker and closer to their original color.
